Lab 3 report

Expression and grammar have not changed since Lab 2.

For precedence, Essant follows the exact same style as the examples shown in class:

Expression -> equality (!= and ==) -> comparison (< > <= and >=) -> term (+ and -) -> factor (* and /) -> unary (! and -) -> primary (false, true, null, literals, and groupings).

Essant always uses left associativity.

For testing, I always use comments to note stuff, so reading through ‘Lab #3 Tests.py’ should answer everything testing related.

For setup, everything worked on my end and I don’t know how you run the tests. If you run into a problem try commenting out everything from the SRC_DIR up to, but NOT including, the first function. And make sure the imports aren’t commented out or in the try block.
